# PORTACOOOL EVAPORATIVE COOLERS

## THE BEST CHOICE FOR INDUSTRIAL COOLING

### COOLING WITH WATER

The technology of Portacool evaporative coolers has evolved to become an energy efficient and effective product that can be used in any industrial environment – arid AND humid. While evaporative coolers use water to cool naturally, they **do not** produce any mist, fog or spray water.

Misters, atomizer fans, foggers and vaporizers spray a shower of water into the air that **will** collect on people, objects, equipment and floors. Portacool® portable evaporative coolers evaporate water within the evaporative media to prevent any dispelled moisture. This creates a safer, more comfortable work environment. You can stand directly in front of a Portacool evaporative cooler and will not walk away damp, unlike a misting product. With Portacool evaporative coolers you can keep your floors dry, your equipment rust free and keep airborne contaminants from being breathed by employees while maintaining a safe, comfortable facility.

**To cool with water, water must be evaporated.** One gallon of evaporated water removes as much as 8,000 BTUs of heat from the air. To get more cooling, more water must be evaporated. *Don't be fooled by claims that less water is better.* If you want the most efficient cooling, you need Portacool evaporative coolers.

### PRODUCT FEATURES

#### Flexible cooling for any location

Products are available in multiple sizes to cool spaces from 1,125 to 6,250 square feet per product. Our products are created with end-users in mind -- select the product that is perfectly designed for your exact space and cooling requirements.

#### KUUL Comfort™ evaporative media

Kuul is the only evaporative cooling media manufactured in the USA. It is designed to the exact performance requirements of Portacool portable evaporative coolers to reach the highest levels of evaporative efficiency which provides the most cooling power available. Kuul's efficiency means you cool in even humid environments. The media will last up to five years with proper maintenance.

 <p>Leading warranties on evaporative cooler motor and electrical components</p>	 <p>Lifetime warranty on all molded housings</p>	 <p>Live U.S.-based Customer Service</p>

WHEN COMFORT COUNTS™

- MOLED IN HANDLES
- WATER ADJUSTMENT
- LIQUID LEVEL INDICATOR WITH LOW WATER SHUTOFF
- ONE PIECE HOUSING
- DUAL WATER FILL
- GFCI PLUG
- EXTRA LARGE DRAIN
- HEAVY DUTY CASTERS

# DON'T LET HIGH TEMPS SLOW YOU DOWN

**EVERY DEGREE MATTERS**

Keep workers and soldiers cool, safe and productive.

Many companies brag that their products only use a few gallons of water a day. In reality, the more water an evaporative cooler uses the better it is working – meaning the more cool, refreshing air it is producing. Portacool evaporative coolers all come with a built in reservoir (ranging from 50 to 75 gallons) and hose connections for continuous feed, which means keeping the cool air coming for long periods of time is no problem. Plus, all Portacool products come equipped with low water shutoff sensors to protect your investment.

## STORAGE IS A SNAP

All Portacool housings are made of durable, non-corrosive roto-molded plastic. Each come with heavy duty casters and handles for easy portability when storage is necessary. No assembly is required and there are no unnecessary latches, locks and pins which will break, rust and need replacing.

## PROTECTING OUR ENVIRONMENT

No chemicals are needed for Portacool evaporative coolers to create a comfortable, safe, cool environment! Using only the environmentally-friendly process of evaporation, our products can cool any outdoor or open-air space with only water and minimal electrical energy, which makes them perfect for any industrial or military application.

## U.S. BORN, U.S MADE

Portacool products have been manufactured proudly in Center, Texas, for more than 25 years and sold to more than 100 countries. They can be configured to any plug or electrical configuration.

## PERFORMANCE

Portacool evaporative coolers provide dramatic airflow and coverage. With our products cool air can be felt up to 300 feet away depending on the product. Using only about 264 kilowatt-hours and costs of just over \$1 to operate per day on average, Portacool evaporative coolers are the most energy-efficient cooling products on the market.

*Portacool, LLC has proudly kept our military and warfighters safe and cool for more than 20 years.*
